## Power Maths calculation policy, KS1

The following pages show the *Power Maths* progression in calculation (addition, subtraction, multiplication and division) and how this works in line with the National Curriculum. The consistent use of the CPA (concrete, pictorial, abstract) approach across *Power Maths* helps children develop mastery across all the operations in an efficient and reliable way. This policy shows how these methods develop children's confidence in their understanding of both written and mental methods.

## **KEY STAGE 1**

Children develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. They learn how to use an understanding of 10s and 1s to develop their calculation strategies, especially in addition and subtraction.

**Key language:** whole, part, ones, ten, tens, number bond, add, addition, plus, total, altogether, subtract, subtraction, find the difference, take away, minus, less, more, group, share, equal, equals, is equal to, groups, equal groups, times, multiply, multiplied by, divide, share, shared equally, times-table

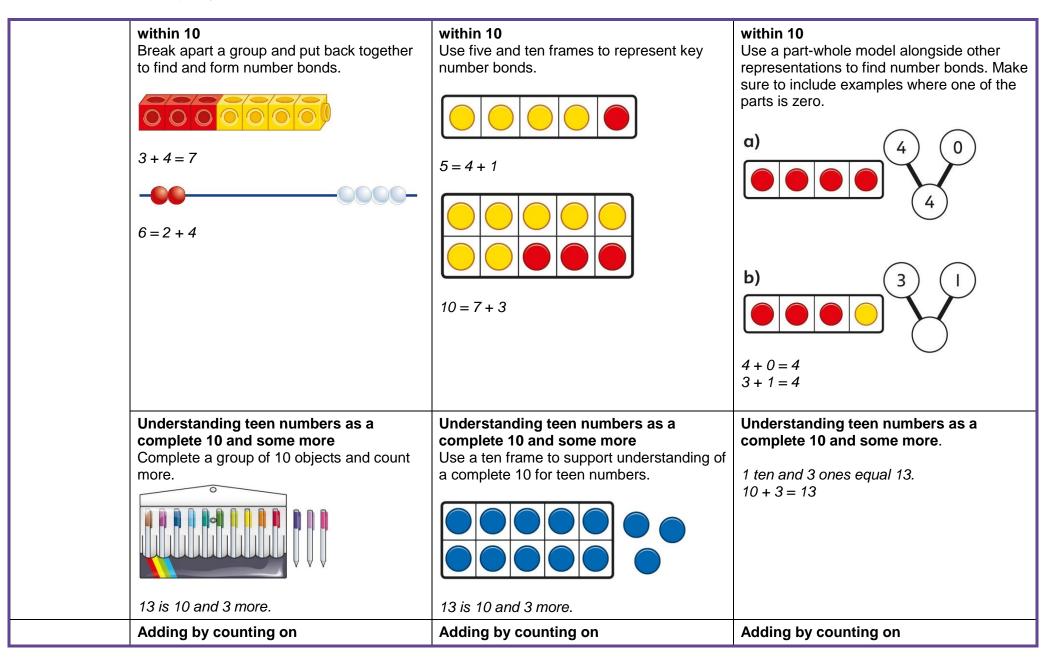

connect addition and subtraction with counting, but they soon develop two very important skills: an understanding of parts and wholes, and an understanding of unitising 10s, to develop efficient and effective calculation strategies based on known number bonds and an increasing awareness of place value. Addition and subtraction are taught in a way that is interlinked			
mathematical thinking to ensure accuracy and flexibility of approach, and the importance of using known number facts to harness their recall of bonds within 20 to support both addition and subtraction methods. In Year 2, they will start to see calculations presented in a column format, although this is not expected to be formalised until KS2. We show the column method in Year 2 as an option; teachers may not wish to include it until Year 3.	connect addition and subtraction with counting, but they soon develop two very important skills: an understanding of parts and wholes, and an understanding of unitising 10s, to develop efficient and effective calculation strategies based on known number bonds and an increasing awareness of place value. Addition and subtraction are taught in a way that is interlinked to highlight the link between the two operations. A key idea is that children will select methods and approaches based on their number sense. For example, in Year 1, when faced with 15 – 3 and 15 – 13, they will adapt their ways of approaching the calculation appropriately. The teaching should always emphasise the importance of mathematical thinking to ensure accuracy and flexibility of approach, and the importance of using known number facts to harness their recall of bonds within 20 to support both addition and subtraction methods. In Year 2, they will start to see calculations presented in a column format, although this is not expected to be formalised until KS2. We show the column method in Year 2 as an option; teachers	awareness of equal groups and link this with counting in equal steps, starting with 2s, 5s and 10s. In Year 2, they learn to connect the language of equal groups with the mathematical symbols for multiplication and division. They learn how multiplication and division can be related to repeated addition and repeated subtraction to find the answer to the calculation. In this key stage, it is vital that children explore and experience a variety of strong images and manipulative representations of equal groups, including concrete experiences as well as abstract calculations. Children begin to recall some key multiplication facts, including doubles, and an understanding of the 2, 5 and 10 times-tables and how they are	representations of these fractions, and learn to recognise examples and non-examples, based on their awareness of equal parts of a whole. In Year 2, they develop an awareness of unit fractions and experience non-unit fractions, and

	Children use knowledge of counting to 20 to find a total by counting on using people or objects.	Children use counters to support and represent their counting on strategy.	Children use number lines or number tracks to support their counting on strategy.
	<b>Adding the 1s</b> Children use bead strings to recognise how to add the 1s to find the total efficiently. 2 + 3 = 5	Adding the 1s Children represent calculations using ten frames to add a teen and 1s.	7 + 5 = $\bigcirc$ Adding the 1s Children recognise that a teen is made from a 10 and some 1s and use their knowledge of addition within 10 to work efficiently. 3 + 5 = 8 So, 13 + 5 = 18
	12 + 3 = 15 Bridging the 10 using number bonds Children use a bead string to complete a 10 and understand how this relates to the addition.	2 + 3 = 5 12 + 3 = 15 Bridging the 10 using number bonds Children use counters to complete a ten frame and understand how they can add using knowledge of number bonds to 10.	Bridging the 10 using number bonds Use a part-whole model and a number line to support the calculation. $\begin{pmatrix} 4 \end{pmatrix}$
	7 add 3 makes 10. So, 7 add 5 is 10 and 2 more.	$\begin{array}{ c c } \hline & & & & & \\ \hline & & & & \\ \hline & & & & \\ \hline & & & &$	$ \begin{array}{c} 1 \\ 3 \\ 9 \\ 4 \\ 9 \\ 4 \\ 13 \end{array} $
Year 1	Counting back and taking away	Counting back and taking away	Counting back and taking away

Arrange two groups so that the difference between the groups can be worked out.	Represent objects using sketches or counters to support finding the difference.	Children understand 'find the difference' as subtraction.
Image: Second system       Image: Second system <td< th=""><th>5 - 4 = 1 The difference between 5 and 4 is 1.</th><th><math display="block">\begin{array}{c} &amp; &amp; &amp; \\ \hline &amp; &amp; &amp; \\ 0 &amp; 1 &amp; 2 &amp; 3 &amp; 4 &amp; 5 &amp; 6 &amp; 7 &amp; 8 &amp; 9 &amp; 10 \\ 10 - 4 = 6 \\ \hline &amp; \\ The \ difference \ between \ 10 \ and \ 6 \ is \ 4. \end{array}</math></th></td<>	5 - 4 = 1 The difference between 5 and 4 is 1.	$\begin{array}{c} & & & \\ \hline & & & \\ 0 & 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10 \\ 10 - 4 = 6 \\ \hline & \\ The \ difference \ between \ 10 \ and \ 6 \ is \ 4. \end{array}$
Subtraction within 20 Understand when and how to subtract 1s efficiently.	Subtraction within 20 Understand when and how to subtract 1s efficiently.	Subtraction within 20 Understand how to use knowledge of bonds within 10 to subtract efficiently.
Use a bead string to subtract 1s efficiently. 5-3=2 15-3=12	$ \begin{array}{c}  \hline  \hline $	5 - 3 = 2 15 - 3 = 12
Subtracting 10s and 1s For example: 18 – 12 Subtract 12 by first subtracting the 10, then	Subtracting 10s and 1s For example: 18 – 12 Use ten frames to represent the efficient	Subtracting 10s and 1s Use a part-whole model to support the calculation.
the remaining 2.	method of subtracting 12.         Image: Strategy and the subtract of subtract the subtract	(14) $(10)$ $(14)$ $19 - 14$ $19 - 10 = 9$ $9 - 4 = 5$
Subtraction bridging 10 using number	Subtraction bridging 10 using number	So, 19 - 14 = 5 Subtraction bridging 10 using number

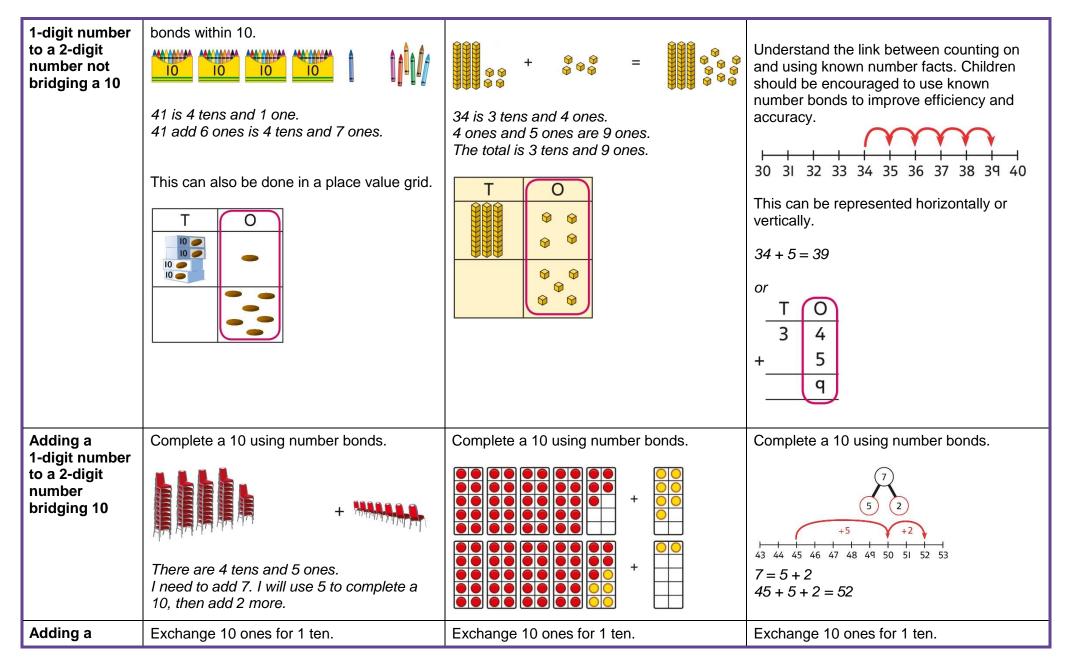

Year 1 Multiplication	then the 5. <b>Recognising and making equal groups</b> Children arrange objects in equal and unequal groups and understand how to recognise whether they are equal.	Recognising and making equal groups Children draw and represent equal and unequal groups.	<b>Describe equal groups using words</b> <i>Three equal groups of 4.</i> <i>Four equal groups of 3.</i>
	Finding the total of equal groups by counting in 2s, 5s and 10s There are 5 pens in each pack 510152025303540	Finding the total of equal groups by counting in 2s, 5s and 10s 100 squares and ten frames support counting in 2s, 5s and 10s. $\begin{array}{ c c c c c c c c c c c c c c c c c c c$	Finding the total of equal groups by counting in 2s, 5s and 10s Use a number line to support repeated addition through counting in 2s, 5s and 10s.
		31       32       33       34       35       36       37       38       39       40         41       42       43       44       45       46       47       48       49       50         Grouping	0 10 20 30 40 50 Grouping

Division	Learn to make equal groups from a whole and find how many equal groups of a certain size can be made. Sort a whole set people and objects into equal groups.	Represent a whole and work out how many equal groups. There are 10 in total. There are 5 in each group. There are 2 groups.	Children may relate this to counting back in steps of 2, 5 or 10.
	Sharing Share a set of objects into equal parts and work out how many are in each part.	Sharing Sketch or draw to represent sharing into equal parts. This may be related to fractions.	<b>Sharing</b> 10 shared into 2 equal groups gives 5 in each group.

	Year 2			
	Concrete	Pictorial	Abstract	
Year 2 Addition				
Understanding 10s and 1s	Group objects into 10s and 1s.	Understand 10s and 1s equipment, and link with visual representations on ten frames.	Represent numbers on a place value grid, using equipment or numerals. Tens Ones 3 2 Tens Ones 4 3	
Adding 10s	Use known bonds and unitising to add 10s. ())) ()) ()) ()) ()) ()) ()) ()) ()) ()	Use known bonds and unitising to add 10s.	Use known bonds and unitising to add 10s. $4 + 3 = 1$ $4 + 3 = 7$ $4 \tan 3 = 7 \tan 3 \tan$	
Adding a	Add the 1s to find the total. Use known	Add the 1s.	Add the 1s.	

1-digit number to a 2-digit number using exchange			$ \begin{array}{c} T \\ 0 \\ 2 \\ 4 \\ + \\ 8 \\ 2 \\ 1 \end{array} $ $ \begin{array}{c} T \\ 0 \\ 2 \\ 4 \\ 8 \\ 3 \\ 2 \\ 1 \end{array} $
Adding a multiple of 10 to a 2-digit number	Add the 10s and then recombine. Add the 10s and then recombine.	Add the 10s and then recombine. Add the 10s and then recombine. Add the 10s and then recombine. 4 + 4 + 4 + 4 + 4 + 4 + 4 + 4 + 4 + 4 +	Add the 10s and then recombine. 37 + 20 = ? 30 + 20 = 50 50 + 7 = 57 37 + 20 = 57
Adding a multiple of 10	Add the 10s using a place value grid to support.	Add the 10s using a place value grid to support.	Add the 10s represented vertically. Children must understand how the method relates to

to a 2-digit number using columns	T       O         Image: Constraint of the state of the	T       O         Image: Constraint of the state of the	unitising of 10s and place value. $\begin{array}{r} T & O \\ \hline I & 6 \\ + 3 & 0 \\ \hline 4 & 6 \end{array}$ $1 + 3 = 4$ $1 \text{ ten + 3 tens} = 4 \text{ tens}$ $16 + 30 = 46$
Adding two 2-digit numbers	Add the 10s and 1s separately. Add the 10s and 1s separately. 5+3=8 There are 8 ones in total. 3+2=5 There are 5 tens in total. 35+23=58	Add the 10s and 1s separately. Use a part-whole model to support. 32 + 11 $11 = 10 + 1$ $32 + 10 = 42$ $42 + 1 = 43$ $32 + 11 = 43$	Add the 10s and the 1s separately, bridging 10s where required. A number line can support the calculations. $\frac{+10 + 10 + 3 + 2}{17} + \frac{T \ 0}{1 \ 7} + \frac{2 \ 5}{}$ 17 + 25
Adding two 2-digit numbers using	Add the 1s. Then add the 10s.		Add the 1s. Then add the 10s.

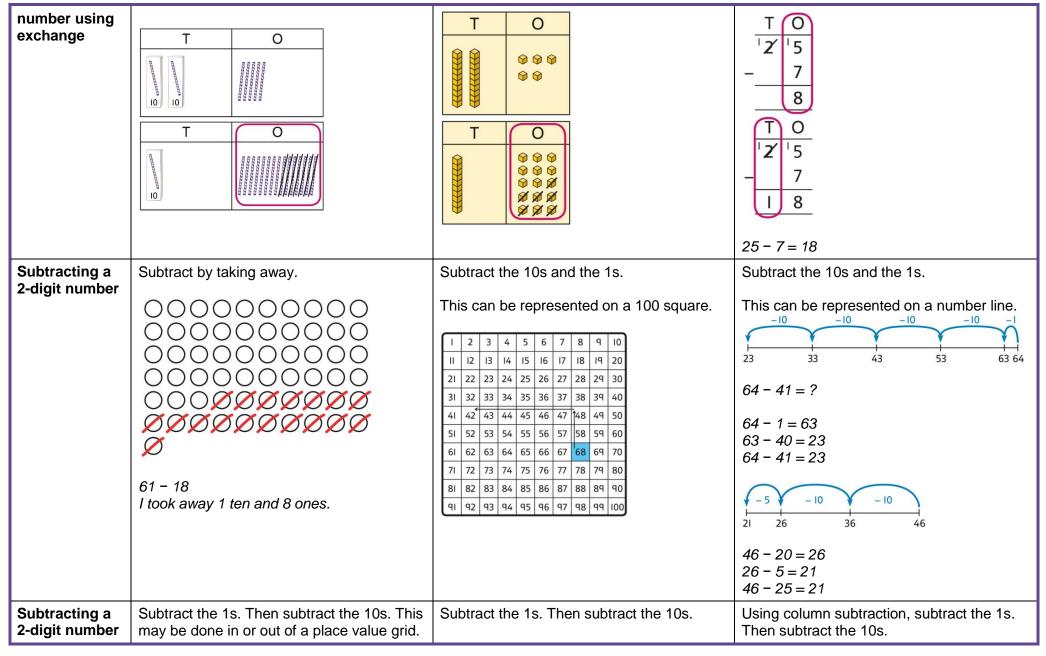

a place value grid	Tens       Ones         (1)       (2)         (2) <td< th=""><th><math display="block">     \begin{array}{c}       T \\       \hline       3 \\       + \\       4 \\       \hline       6        \end{array}     </math> <math display="block">     \begin{array}{c}       T \\       \hline       0 \\       3 \\       2 \\       + \\       4 \\       4 \\       6        \end{array} </math></th></td<>	$     \begin{array}{c}       T \\       \hline       3 \\       + \\       4 \\       \hline       6        \end{array}     $ $     \begin{array}{c}       T \\       \hline       0 \\       3 \\       2 \\       + \\       4 \\       4 \\       6        \end{array} $
Adding two 2-digit numbers with exchange	Add the 1s. Exchange 10 ones for a ten. Then add the 10s. Tens Ones + 2 q Tens Ones 000000	Add the 1s. Exchange 10 ones for a ten. Then add the 10s. $\frac{T}{3} \frac{O}{6} + \frac{2}{5} \frac{Q}{5}$ $\frac{T}{3} \frac{O}{6} + \frac{2}{5} \frac{Q}{6} \frac{1}{5}$
Year 2 Subtraction		

Subtracting multiples of 10	Use known number bonds and unitising to subtract multiples of 10.	Use known number bonds and unitising to subtract multiples of 10.	Use known number bonds and unitising to subtract multiples of 10.
	QUALITY OF A A A A A A A A A A A A A A A A A A	IOO           30	2 5 20 50
	8 subtract 6 is 2. So, 8 tens subtract 6 tens is 2 tens.	10 - 3 = 7 So, 10 tens subtract 3 tens is 7 tens.	7 tens subtract 5 tens is 2 tens. 70 − 50 = 20
Subtracting a single-digit number	Subtract the 1s. This may be done in or out of a place value grid.	Subtract the 1s. This may be done in or out of a place value grid.	Subtract the 1s. Understand the link between counting back and subtracting the 1s using known bonds.
			$ \begin{array}{cccc}                                  $
Subtracting a	Bridge 10 by using known bonds.	Bridge 10 by using known bonds.	Bridge 10 by using known bonds.

Tens Ones Tens Ones Tens Ones Tens Ones Tens Ones Tens Ones	Using column subtraction, exchange 1 ten for 10 ones. Then subtract the 1s. Then subtract the 10s. $\frac{T O}{4 5}$ $-2 7$ $\frac{T O}{3 \# 5}$ $-2 7$ $\frac{T O}{3 \# 5}$ $-2 7$ $\frac{T O}{3 \# 5}$ $-2 7$ $\frac{8}{8}$ $\frac{T O}{3 \# 5}$ $-2 7$ $\frac{8}{18}$
Year 2			

Multiplication			
Equal groups and repeated addition	Recognise equal groups and write as repeated addition and as multiplication.	Recognise equal groups using standard objects such as counters and write as repeated addition and multiplication.	Use a number line and write as repeated addition and as multiplication. $\overrightarrow{1}$ 0 5 10 15 5+5+5=15 $3 \times 5=15$
Using arrays to represent multiplication and support understanding	Understand the relationship between arrays, multiplication and repeated addition.	Understand the relationship between arrays, multiplication and repeated addition.	Understand the relationship between arrays, multiplication and repeated addition. $\overrightarrow{0}$ 5 10 15 20 25 $5 \times 5 = 25$
Understanding commutativity	Use arrays to visualise commutativity.	Form arrays using counters to visualise commutativity. Rotate the array to show that orientation does not change the multiplication. This is 2 groups of 6 and also 6 groups of 2.	Use arrays to visualise commutativity. $4+4+4+4+4=20$ $5+5+5=20$ $4 \times 5 = 20 \text{ and } 5 \times 4 = 20$
Learning ×2,	Develop an understanding of how to unitise	Understand how to relate counting in	Understand how the times-tables increase

Division			
Sharing equally	Start with a whole and share into equal parts, one at a time.	Represent the objects shared into equal parts using a bar model.	Use a bar model to support understanding of the division.
	<ul> <li>Cocococococococococococococococococococ</li></ul>	20 shared into 5 equal parts. There are 4 in each part.	$18 \div 2 = 9$
	people, take a group of 3 and give 1 to each person. Keep going until all the objects have been shared		
	They get 5 each. 15 shared equally between 3. They get 5 each.		
Grouping equally	Understand how to make equal groups from a whole.	Understand the relationship between grouping and the division statements.	Understand how to relate division by grouping to repeated subtraction.

Power Maths © Pearson 2019

	<u></u>	$12 \div 3 = 4$	
	8 divided into 4 equal groups. There are 2 in each group.	$12 \div 4 = 3$	0 1 2 3 4 5 6 7 8 9 10 11 12
		l2 ÷ 6 = 2	There are 4 groups now.
		$ 2 \div 2 = 6$	12 divided into groups of 3. 12 $\div$ 3 = 4
			There are 4 groups.
Using known times-tables to solve divisions	Understand the relationship between multiplication facts and division.	Link equal grouping with repeated subtraction and known times-table facts to support division.	Relate times-table knowledge directly to division.
		40  divided by 4 is 10. Use a bar model to support understanding of the link between times-table knowledge	$ \begin{array}{c} 1 \times 10 = 10 \\ 2 \times 10 = 20 \\ 3 \times 10 = 30 \\ 4 \times 10 = 40 \\ 5 \times 10 = 50 \\ 6 \times 10 = 60 \\ 7 \times 10 = 70 \\ 8 \times 10 = 80 \end{array} $ I used the 10 times-table to help me. $3 \times 10 = 30$ . $1 \times 10 = 30$ . I know that 3 groups of 10 makes 30, so 1
	<i>4 groups of 5 cars is 20 cars in total.</i> <i>20 divided by 4 is 5.</i>	and division. $60$	know that 30 divided by 10 is 3. $3 \times 10 = 30$ so $30 \div 10 = 3$
